# SECTION A. STUDY METHODOLOGY

## Sampling Frame Construction

The sampling frame was designed to encompass the Jewish population across Cook, DuPage, Lake, Kane, McHenry, and Will counties in Illinois and was constructed from two main sets of data sources: (1) combined, de-duplicated membership lists from more than 40 Chicagoland-area Jewish organizations and (2) an extract from the U.S. Postal Service Computerized Delivery Sequence File (CDSF) to ensure broad coverage of the Jewish community in the Chicago metropolitan area.

Both sets of data sources were used for the main sample. To be eligible for the main sample, a household needed to have a valid mailing address available. Main sample households were eligible to be contacted by mail, phone, or email for recruitment for the survey. In addition, a supplemental sample contacted by email only was developed using only organization list records with email addresses available.

### Organization List Frame

In addition to utilizing databases available from JUF, the study team contacted a wide variety of organizations in the community and asked them to share their membership lists for inclusion in the study. More than 40 additional organizations participated representing a broad cross-section of the community, including synagogues, day schools, early childhood centers, social service agencies, and youth organizations.

The study team used a probabilistic record linkage model to identify and remove households appearing on multiple lists. After removing likely business addressees using the USPS CDSF, names, mailing addresses, and contact information were cleaned across all files. The data were blocked into potential match groups using the ZIP code and address number fields. Then, matching weights were calculated for each field using a stochastic boosting algorithm with the *trainSupv* function using the R *RecordLinkage* package.<sup>1</sup> The resulting weights were used to identify likely households appearing across multiple lists, and then likely duplicates were removed. Records with common email addresses were also removed from the data file in preparation for a supplemental email sample, to be contacted by email only.

There were 122,700 households on the organization list frame with mailing addresses available that were eligible for the main sample. An additional 12,887 records had email addresses available but no mailing addresses. These households were eligible for the supplemental email sample, but not the main sample.

### Address-Based Frame

To assure broad coverage of the Jewish community across the six-county Chicago metropolitan area, the study additionally conducted address-based sampling (ABS) from the aforementioned U.S. Postal Service CDSF. All addresses from the organization list frame were removed from the address-based frame.

---

<sup>1</sup> See Sariyar, M., & Borg, A. (2010). The *RecordLinkage* Package: Detecting Errors in Data. *R Journal*, 2(2), 61.

Households from the CDSF that were identified by the vendor Infogroup as likely-Jewish based on mailing subscriptions and ethnic names were oversampled to increase the likelihood of reaching Jewish respondents. There were 87,256 such households who were not on the organization list frame. In addition, Marketing Systems Group (MSG) identified 435 separate households that were more likely to be Russian-speaking and Jewish as well as 6,590 households more likely to be both nonwhite and Jewish. Due to the importance of these groups for the study, these sets of households were oversampled as well.

## Sample Design

A stratified sample design was employed for both portions of the frame to ensure representation of different population subgroups, to increase the likelihood of reaching Jewish households, and to assure broad coverage of the Chicago metropolitan area Jewish community.

### Organization List Sample Design

The organization list frame grouped lists and records within lists into strata, both to increase the likelihood of reaching specific subgroups within the Metropolitan Chicago Jewish community and to obtain sufficient numbers of completed interviews to support estimation for different subgroups. The following describes the strata, with households that could be classified as belonging to multiple demographic groups assigned to the first stratum in the list for which they were classified:

- Likely Orthodox, including specific strata for reaching Lubavitch, Yeshivish/Litvish, and Modern Orthodox communities, as well as a stratum for lists not affiliated with a subgroup of Orthodox Jews;
- Likely young families to reach households likely having children ages 0 to 4. Due to interest in estimates regarding families with children enrolled and not enrolled in Jewish early childhood centers, two strata were formed corresponding to each group;
- Small subpopulations, including households with likely disabled individuals, households with likely LGBTQ individuals, likely interfaith households, likely Russian-speaking Jewish households, likely Israeli households, and households with likely nonwhite individuals. All cases in this stratum were identified based on list membership;
- An additional likely nonwhite stratum, using either names or geographic area of residence to increase the likelihood of reaching nonwhite Jewish households;
- Likely Israeli households;
- Likely young adults;
- Other families (with children older than age 4);
- Other adults, separating lists into strata based upon higher or lower likelihood of eligibility for the study by list.

In order to assure an even distribution of the sample across geographic areas of Metropolitan Chicago, the study team employed systematic sampling<sup>2</sup> to sort the frame within strata by region, zip code, block, street name, and street number and then sampling at regular intervals within strata. In

---

<sup>2</sup> Kish, L. (1965) *Survey sampling*. John Wiley and Sons, Inc., New York.

order to support estimates in the Far Northwest Suburbs, Southern Suburbs, and Western Suburbs, specific strata were separated from the Other Adults – Higher Eligibility stratum to be oversampled.

Table A1 shows stratum sizes and number of cases sample by stratum within the organization list frame. The stratum sizes reflect number of households with mailing addresses available who were eligible for the main sample as well as the total number with either mailing or email address available, as cases with email addresses were eligible for the supplemental sample regardless of the availability of a mailing address. The sample sizes for the main sample are shown as well as the sample size for the supplemental sample contacted by email only. Because strata were grouped for sampling for the supplemental sample, the number sampled is shown by those groupings. The supplemental sample was drawn after households had been selected for the main sample.

As previously described, any household that based on their source lists could be classified as belonging to multiple demographic groups were included in the first stratum appearing in the table for which they were classified.

**Table A1. Organization List Sample Design**

<b>Stratum</b>	<b>Number of Households Eligible for Main Sample<sup>a</sup></b>	<b>Number of Households Eligible for Full Sample<sup>b</sup></b>	<b>Sample Size, Main Sample</b>	<b>Sample Size, Supplemental Sample</b>
Likely Lubavitch	253	253	229	2,154
Likely Yeshivish/Litvish	1,480	1,480	1,268	
Likely Modern Orthodox	3,741	3,743	2,700	
Likely Orthodox (Any Subgroup)	628	628	568	
Likely Young Families (Jewish early childhood)	2,860	2,878	2,066	
Likely Young Families (Other)	2,870	2,935	2,344	
Small Subpopulations	1,043	1,552	1,043	
Likely Nonwhite (Names,	4,512	4,954	2,187	
Likely Young Adults	17,710	27,801	2,371	8,820
Other Families	16,131	17,617	2,539	2,337
Other Adults (Higher Eligibility, Far Northwest Suburbs)	2,765	2,765	715	8,687
Other Adults (Higher Eligibility, Southern Suburbs)	1,967	1,967	1,009	
Other Adults (Higher Eligibility, Western Suburbs)	1,920	1,920	699	
Other Adults (Higher Eligibility, Remaining Areas)	52,483	52,746	5,395	
Other Adults (Lower Eligibility)	12,337	12,348	2,879	2,105
<b>Total</b>	<b>122,700</b>	<b>135,587</b>	<b>28,012</b>	<b>24,103</b>

<sup>a</sup>To be eligible for main sample, households had to have a valid Chicago metropolitan area address on the sample frame.

<sup>b</sup>To be eligible for full sample, households either had to have either a valid mailing address (eligible for main sample) and/or an email address (eligible for supplemental sample).

## Address-Based Sample Design

Address-based sampling<sup>3</sup> was conducted using a stratified sample design was employed from the CDSF portion of the frame. Lists from vendor data sources were used to increase the likelihood of Jewish households. In addition, the design stratified census block groups in the study area based on estimated Jewish density. As previously described, vendor data from Infogroup was used to determine likely Jewish households to oversample, and data from MSG was used to identify two groups: households more likely to be Russian-speaking and Jewish and households more likely to have nonwhite Jewish household members.

The study team developed a measure related to the Jewish density at the census block group-level. The study team chose census block groups as a fairly small geographic unit for this as block groups typically designed by the U.S. Census Bureau to have between 600 and 3,000 residents on average. The resulting measures were developed by combining two input block group-level measures: (1) the percentage of households in the block group on the de-duplicated organization list frame and (2) the percentage of households in the block group identified by Infogroup as likely Jewish. The number of households in the area was taken from American Community Survey estimates. A principal component analysis was conducted of the two measures, and the first principal component was taken as a correlate of Jewish density. Block groups were ranked by the resulting Jewish density measure and then grouped into four categories of likely Jewish density: *high*, *medium*, *low*, and *very low*.

The Infogroup households were stratified into three groups based the block group classifications: *high*, combined *medium/low*, and *very low*. Among the remaining households on the frame, strata were formed for the *high* and *medium* density groups. Due to the large number of cases needing to be sampled to reach Jewish households in the *low* and *very low* block groups, the study team did not sample additional households in these areas who were not available from Jewish organization or vendor lists. Due to the concentration of the population in specific geographic areas as well as the population coverage from organization lists and vendor data, the study team estimates that the sample design covered 96.0% of Jewish households in the Chicago metropolitan area.

As for the organization list sample design, systematic sampling was used to draw an evenly distributed sample across the Chicago metropolitan area.

Table A2 presents details of the sample design from the address-based frame.

**Table A2. Address-Based Sample Design**

<b>Stratum</b>	<b>Stratum Size</b>	<b>Sample Size</b>
Likely Jewish	<b>94,271</b>	<b>14,542</b>
Likely Russian-speaking and Jewish (MSG)	435	302
Likely Jewish and nonwhite (MSG)	6,590	786
Likely Jewish in high Jewish density areas (Infogroup)	15,444	3,992
Likely Jewish in medium/low Jewish density areas (Infogroup)	64,669	8,807
Likely Jewish household in very low Jewish density areas (Infogroup)	7,133	665
Not likely Jewish	<b>1,467,412</b>	<b>11,000</b>
Remaining, high density Jewish areas	153,177	3,000
Remaining, medium density Jewish areas	1,314,235	8,000
<b>Total</b>	<b>1,561,683</b>	<b>25,542</b>

## Sample Releases

Sample for the study was released in three different waves in order to gauge the cooperation with the survey and release the amount of sample needed to achieve target numbers of completes overall and to support estimates for key groups. The first wave starting in October 2020 sampled 30,385 main sample households and all 24,103 households in the supplemental sample. The second wave started in November and sampled an additional 21,262 households. The final wave began in December 2020 and January 2021 and sampled 1,907 further households before data collection concluded in mid-January.

## Survey Instrument and Data Collection

The survey instrument was designed in collaboration with JUF and informed by the input of community members. The questions were crafted to minimize potential bias and any burden on respondents. Where possible, questions, language, and definitions were adopted from previously published Jewish community survey questionnaires to support comparability of estimates to other communities, while adapting many questions for the content needs for the Chicago metropolitan area community.

The survey was designed and programmed for two modes: web and Computer Assisted Telephone Interview (CATI), with CATI interviews conducted by NORC telephone interviewers trained in the content of the questionnaire. Respondents had the option to complete both web and telephone interviews over multiple sessions.

The questionnaire was divided into two parts, a screener to determine eligibility for the survey and the survey itself for all respondents who screened in. The screener section was asked of all respondents to determine eligibility. Any household in the sample was considered eligible if it contained at least one adult aged 18 or older who lived in six county Chicago metropolitan area for at least part of the year and considered himself or herself to be Jewish.

The screener portion had a Spanish response option for both web and CATI. The main survey was available in English only.

Out of 3,877 completed main sample interviews, 3,288 were completed by web, 584 were completed using CATI, and 5 interviews were conducted in Russian over the phone by CMJS staff, with responses entered in the web instrument.

The web version of the survey typically took 20 to 35 minutes to complete with a median of 26 minutes. Phone interviews typically took 25 to 50 minutes to complete with a median of 37 minutes.

## Sample Recruitment

Data collection ran from October 9, 2020 to January 19, 2021. Main sample members were contacted using differing materials based upon whether they were sampled from the organization list frame or the address-based frame.

The organization list sample was contacted using materials branded as “Metropolitan Chicago Jewish Population Study.” As these households were affiliated with Chicagoland-area Jewish organizations, the study team identified the purpose of the study as a Jewish community study sponsored by JUF to encourage participation. Respondents were mailed an initial invitation letter with an access code to take the survey on the web and with information on the option to call NORC to complete the survey with a phone interviewer as well as to contact CMJS for Russian-language interviews. The letter was mailed with an FAQ card with information on the study. A few days later, an email was sent to sample members when available, with the link and access code to take the survey on the web as well as the phone number to request a phone interview. One week after mailing the letter, a thank you/reminder postcard was sent to respondents, followed by a second email a few days afterward. One week after mailing the reminder postcard, a second letter was sent to nonrespondents with an FAQ card. A few days after, NORC phone interviewers made phone calls to invite pending sample members for phone interviews, making up to five total calls per household. Additionally, further reminder emails were sent every one to two weeks until the end of the study period, varying language to recruit respondents.

The address-based sample was contacted using materials branded as “Chicagoland Speaks!” that discussed surveying sample members about issues facing Chicagoland residents. In order to recruit respondents regardless of their religious background, the materials did not identify the survey as a Jewish community study, nor mentioned JUF’s sponsorship. Anticipating that participation rates in the survey may be otherwise lower for the address-based sample relative to the organization list sample, respondents were mailed a \$2 bill with their initial invitation letter. The recruitment materials also offered a \$10 post-incentive for respondents who screened in and completed survey, which was offered in the form a gift card of the respondent’s choosing. To alert respondents as to the survey invitation and the \$2 incentive in their invitation letter, respondents were mailed a pre-notification postcard a few days before the invitation letter was mailed. The invitation letter contained an FAQ card and a link and access code for taking the survey on the web as well as information for calling NORC to schedule a phone interview. The letter was two-sided with English on one side and Spanish on another side. The invitation letter was followed by a thank you/reminder postcard mailed one week later and a second letter with FAQ card mailed a week after that. No emails were sent to the address-based sample. Reminder phone calls followed the same protocol as for the address-based sample.

The supplemental sample from the organization list frame received similar emails to the main sample from the same frame, but were not mailed letters nor received phone call reminders.

## Survey Weighting

Survey weights were developed to support estimation. The survey weighting process incorporated the following steps for household-level weights:

1. Base weights that reflect the sample design and probabilities of selection;
2. Adjustment for resolution of address and for nonresponse to the screener;
3. Raking adjustments to control totals that included demographic data on the full population from the ACS' demographic estimates on the Jewish by religion population from Brandeis University's American Jewish Population Project; and data collected by JUF on synagogue membership, day school enrollment, Jewish part-time school enrollment, Jewish preschool enrollment, donations to JUF, and PJ Library subscriptions;
4. Adjustment for nonresponse to the main interview among screened in households;
5. Trimming to reduce the influence of large survey weights on estimates; and
6. A final raking using JUF data and estimates use the raked weights among screener completes.

The above process produced the final household-level weight for estimates of all Jewish households in the metropolitan Chicago area. A weight for estimates of all adults living in these households was produced by multiplying the household-level weight by the number of adults in the household. In addition, a weight for estimates of all Jewish adults was produced by multiplying the household-level weight by the number of Jewish adults in the household.

The weighting process was conducted twice, once for the main sample alone and once for the full sample (combined main and supplemental samples). Thus, six survey weights were developed in total, with two sets of the three survey weights.

The following describes the details of each step of the weighting process.

### Household-Level Base Weight

The base weight was calculated to adjust for the probability of being included in the sample. Specifically, for household  $i$ , the base weight was calculated as:

$$w_{1i} = \frac{1}{\pi_i},$$

where  $\pi_i$  is the probability of a household being selected for the sample, which for the main sample was calculated as the fraction of households sampled in the stratum to the total number of households in the stratum.

There were two versions of the base weights calculated for the main and full samples. To be eligible for the main sample, a mailing address must be available for the household. For the supplemental email sample, an email address must be available.

The main sample base weight was determined based on the number of households with mailing addresses available in the stratum. The full sample base weight was calculated differently in three scenarios: (1) if a household had only a mailing address available, (2) if a household had only an email address available, and (3) if a household had both a mailing address and an email address

available. If a household had only a mailing address available, the full sample base weight was the same as the main sample base weight. If a household had only an email address available, then the base weight was calculated based on the probability of selection for the supplemental sample. If a household had both a mailing address and email address available, the base weight was calculated based on the sum of the probability of being selected for the main sample and the product of the probabilities of both not being selected for the main sample and subsequently being selected for the supplemental sample.

### Adjustment for Resolution of Address and Screener Nonresponse

Not all households sampled are occupied and therefore eligible to take the screener. In addition, some households sampled from the organization list frame were confirmed to live outside the metropolitan Chicago area and therefore also not eligible for the screener. Further, there was nonresponse among households eligible to complete the screener. The weighting procedure conducted an adjustment for resolution of the address and screener nonresponse in one step.

This adjustment was conducted within cells defined by the sampling strata. The sampling strata reflect different source lists for the frame, different demographic groups and kinds of engagement with the Jewish community, and geographic areas with different levels of Jewish density around the metropolitan Chicago area. These aspects led the strata to capture meaningful differences in survey eligibility and cooperation among the sample. Thus, the sampling strata were ideal candidates to form cells for weighting adjustments.

For the full sample weighting process, the adjustment cells were formed based on both sampling strata and sample type (main or supplemental), as the supplemental sample had different levels of eligibility for and cooperation with the survey due to the email-only recruitment. Cells that were less than 30 in sample size were combined with other cells to assure sufficient sample size for conducting this adjustment.

Specifically, the resulting weight at this stage for household  $b$  in adjustment cell  $C$  was calculated as:

$$w_{2i} = w_{1i} \left( \frac{\sum_{j \in C} w_{1j} \left[ I_j^{SC} + I_j^{KE} + I_j^{UE} \left( \frac{\sum_{j \in C} w_{1j} I_j^{KE}}{\sum_{j \in C} w_{1j} [I_j^{KE} + I_j^{KI}] } \right) \right]}{\sum_{j \in C} w_{1j} I_j^{SC}} \right),$$

where  $I_j^{SC}$  is a 1/0 indicator for whether a household completed the screener,  $I_j^{KE}$  is an indicator for whether a household has known eligibility but did not complete the screener,  $I_j^{UE}$  indicates that the household's eligibility for the screener is unknown, and  $I_j^{KI}$  indicates that the household is known to be ineligible for the screener.

### Generalized Raking to Population Totals

The weights for all households that completed the screener were then adjusted to match population estimates from external data sources using a generalized raking procedure. As the external estimates included both household-level and person-level information for adults 18 and older and because

person-level information was reflected in the household-level dataset as count variables, a generalized raking procedure was implemented that incorporated both binary household-level and count person-level variables.<sup>4</sup> The following describes the population estimates used for adjustment in the raking procedure.

American Community Survey estimates on the overall 18+ population in the six-county area were used regarding:

- Age and educational background combinations (18 to 34 year old non-college graduates, 35 to 64 year old non-college graduates, 65 years and old non-college graduates, 18 to 34 year old college graduates, 35 to 64 year old college graduates, 65 years and old college graduates);
- Sex (male, female);
- Race/ethnicity (White non-Hispanic, Other non-Hispanic, Hispanic);
- Geographic regions defined at the sampling stage of the project (City Far North, City North, City Other, Far Northwest Suburbs, Near North Suburbs (East), Near North Suburbs (West), Near Northwest Suburbs, North Shore/Far North, West Suburbs, South Suburbs).

In addition, American Jewish Population Project estimates on the overall 18+ Jewish by religion population in the six-county area were used regarding:

- Age and educational background combinations (18 to 34 year old non-college graduates, 35 to 64 year old non-college graduates, 65 years and old non-college graduates, 18 to 34 year old college graduates, 35 to 64 year old college graduates, 65 years and old college graduates);
- Sex (male, female);
- Race/ethnicity (White non-Hispanic, Other non-Hispanic, Hispanic);
- Geographic regions (City of Chicago; Combined Near North and North Suburbs; Combined Northwest, West, and South Suburbs).

See below for more information on the development of the American Jewish Population Project estimates.

Data provided by JUF were used in raking adjustments regarding:

- The number of households with synagogue memberships, separate for Orthodox, Conservative, Reform, and other synagogues;
- The number of children enrolled in Jewish preschool, Jewish day school, and Jewish part-time school<sup>5</sup>;

---

<sup>4</sup> Deville, J. C., Särndal, C. E., & Sautory, O. (1993). Generalized raking procedures in survey sampling. *Journal of the American Statistical Association*, 88(423), 1013-1020, and Lumley, T. (2011). *Complex surveys: A guide to analysis using R* (Vol. 565). John Wiley & Sons.

<sup>5</sup> JUF provided these three numbers regarding the number of children enrolled in different kinds of schools. For raking, the study team used an estimate of the number of households enrolled calculated using survey data to estimate the number of children enrolled per household.

- The number of households with subscriptions to PJ Library; and
- The number of households donating to JUF.

The resulting weight was  $w_{3i}$ .

### Adjustment for Interview Nonresponse

The data were subsetting to Jewish households eligible for the main interview. Not all households eligible for the main interview proceeded to complete it. Similar to the adjustment for screener response, cells were formed to adjust the weights for interview nonresponse based on sampling strata for the main sample weighting process and sampling strata combined with sample type (main or supplemental) for the full sample weighting process. Cells that were less than 30 in sample size were combined with other cells to assure sufficient sample size for conducting this adjustment.

Specifically, the resulting weight at this stage for household  $h$  in adjustment cell  $C$  was calculated as:

$$w_{4i} = w_{3i} \left( \frac{\sum_{j \in C} w_{3j} [I_j^{IC} + I_j^{IN}]}{\sum_{j \in C} w_{3j} I_j^{IC}} \right),$$

where  $I_j^{IC}$  is a 1/0 indicator for whether a household completed the interview,  $I_j^{IN}$  is an indicator for whether a household was an interview non-complete that was eligible for the main interview.

### Trimming

To reduce the influence of observations with large weights on study estimates, weights were trimmed. The trimming reallocated the weights so the sum of the weights among all interview completes was the same before and after trimming. The resulting weight was  $w_{5i}$ .

### Final Raking for Household-Level Weight

After conducting interview nonresponse adjustment and trimming, the final weight for analyses of Jewish households was produced by conducting a final bounded generalized raking step using the following data:

- Unbiased estimates on the number of 18+ Jews by religion and Jews of no religion resulting from the screener complete weighting phase using  $w_{3i}$ ;
- The number of households with synagogue memberships, separate for Orthodox, Conservative, Reform, and other synagogues;
- Enrollment in Jewish preschool, Jewish day school, and Jewish part-time school;
- The number of households with subscriptions to PJ Library; and
- The number of households donating to JUF.

The resulting weight was  $w_{HH,i}$ .

### Person-Level and Jewish Person-Level Weight

The final weight for analyses of all adults living in Jewish households was calculated by multiplying the household-level weight by the number of age 18 and older total adults living in the household  $P_i$ :

$$w_{P,i} = P_i w_{HH,i}.$$

The final weight for analyses of all Jewish adults was calculated by multiplying the household-level weight by the number of age 18 and older Jewish adults living in the household  $JP_i$ :

$$w_{JP,i} = JP_i w_{HH,i}.$$

## Data Collection Outcomes

Table A3 summarizes data collection results. Results are presented for the overall main and full samples, and the separately for the combined organization list strata, vendor data strata, ABS remainder strata, and supplemental email sample. The AAPOR Response Rate 3 (RR3) is also presented unweighted, weighted by the main sample base weight, and weighted by the full sample base weight.

Table A3. Data Collection Outcomes

	<b>Main Sample</b>	<b>Full Sample</b>	<b>Organization List Strata</b>	<b>ABS Likely Jewish</b>	<b>ABS Not Likely Jewish</b>	<b>Supplemental Email Sample</b>
<b>Sample size</b>	<b>53,554</b>	<b>77,657</b>	<b>28,012</b>	<b>14,542</b>	<b>11,000</b>	<b>24,103</b>
Likely households	15,358	34,435	2,825	9,707	2,826	19,077
Confirmed household, unscreened	29,928	32,599	20,899	2,495	6,534	2,671
Non-residential	2,009	2,316	537	901	571	307
Ineligible – Not in Metro Chicago	231	413	231	0	0	182
Ineligible – Religion	2,056	2,110	152	922	982	54
Eligible household, incomplete interview	95	152	72	21	2	57
<b>Completed interviews</b>	<b>3,877</b>	<b>5,632</b>	<b>3,296</b>	<b>496</b>	<b>85</b>	<b>1,755</b>
<b>AAPOR RR3 (Unweighted)</b>	<b>15.1%</b>	<b>13.3%</b>	<b>15.0%</b>	<b>15.4%</b>	<b>14.6%</b>	<b>9.5%</b>
<b>AAPOR RR3 (Main Sample Base Weighted)</b>	<b>14.4%</b>	<b>-</b>	<b>12.9%</b>	<b>15.2%</b>	<b>14.5%</b>	<b>-</b>
<b>AAPOR RR3 (Full Sample Base Weighted)</b>	<b>14.4%</b>	<b>14.2%</b>	<b>10.7%</b>	<b>15.2%</b>	<b>14.5%</b>	<b>8.9%</b>

For the main sample, there were 3,877 completed interviews among 6,028 who completed the screener and lived in the metropolitan Chicago area. Completed interviews were defined as completing all questions on the roster of adults and children in the household. The final response rate was 15.1% unweighted and 14.4% weighted. When using the final household-level weight to analyze the main sample for all completed interviews, the design effect is 2.99 and the margin of error is +/- 2.7%.

For the full sample that included the supplemental email sample, there were 5,632 completed surveys among 7,894 households who completed the screener and live in the metropolitan Chicago area. The final response rate was 13.3% unweighted and 14.2% weighted. When using the final household-level weight to analyze the full sample for all completed interviews, the design effect is 3.53 and the margin of error is +/- 2.5%.

## Final Population Estimates

Population numbers presented in the report were rounded so as to avoid overprecision – that is, the misleading implication that our estimates are correct down to the single digit.

The precise population estimates with 95% confidence intervals are shown in Table A4. For example, the best estimate of the total Jewish population is 319,551 people. Given the size of the sample and possible sampling and non-response error, we can be 95% confident that the true value lies somewhere between 307,024 people and 332,077 people.

**Table A4. Population estimates with confidence intervals shown**

	<b>Estimate</b>	<b>Lower bound</b>	<b>Upper bound</b>
Total Jews	319,551	307,024	332,077
Adults	346,805	331,864	361,746
Jewish	264,632	254,237	275,027
Non-Jewish	82,173	73,992	90,354
Children	73,537	65,714	81,361
Jewish	54,918	49,853	59,984
Non-Jewish	18,619	12,365	24,873
Total people	420,342	401,347	439,338
Total households	175,799	169,498	182,100

## American Jewish Population Project Estimates

Since 2005, the American Jewish Population Project (AJPP) at the Steinhardt Social Research Institute (SSRI) has identified and collected hundreds of nationally representative surveys of the US population to produce estimates of the Jewish population in the United States, its states, metropolitan areas, and counties (or groups of counties). These estimates provide an independent, external reference for the basic demographic profile of the Jewish population. This population profile serves as a point of reference for the community as a whole and for those who conduct targeted surveys of the population and have no frame of reference for evaluating the representativeness of their survey sample. Details of the methods are reported elsewhere.<sup>6</sup>

The data synthesis method demonstrates how an auxiliary data source can be constructed to provide independent, census-like estimates of the size and characteristics of the adult Jewish by religion

(JBR) population in the U.S. at the county level.<sup>7</sup> These estimates of the adult JBR population may then be used to generate new post-stratification weights. These new post-stratification weights are then applied to the targeted study of the Jewish population.

## Summary of Data

The full sample of surveys in the AJPP dataset consists of data from surveys of nationally representative random samples of the adult population in the U.S. conducted between 1997 and 2020. The dataset includes surveys identified in major data repositories, such as the Inter-university Consortium for Political and Social Research (ICPSR) and the American Religion Data Archive (ARDA), as well as in poll archives at the Roper Center, Gallup, and Pew Research Center. Surveys include the American National Election Studies, Pew Political and social surveys, Gallup Daily Tracking poll, the Cooperative Congressional Election Study (CCES) and other surveys. The dataset includes more than 1,200 independent samples and a total combined sample size of more than 2.9 million respondents, of whom over 69,000 identify as Jewish by religion. Where a single survey may have included multiple sampling methods or frames (e.g., landline versus cellphone), each is treated as a separate independent sample, with unique identifiers to indicate series membership.<sup>8</sup> For surveys that included oversamples, only the representative portion of the samples were included in the analyses.

All of the surveys in the sample provide data on those who identify as Jewish by religion (JBR), which is the largest proportion of the Jewish population and therefore serves as the baseline group for generating population estimates. A smaller number of surveys include assessment of religious upbringing or parents' religious/ethnic identification, or non-religious Jewish identification (for instance, "Do you consider yourself Jewish?") in addition to current religious affiliation.<sup>9</sup>

The present report is based on a custom analysis for the 2020 Metropolitan Chicago Jewish Population Study. The analysis includes data from a subset of 254 national samples that were conducted between the years 2015 and 2019. Several additional surveys are included for the years 2014 and 2020 to increase the sample size, with the assumption that the size and characteristics of the Jewish population does not change substantially in this time period. The subset sample includes just over 26,000 respondents in the Chicago area. In addition to religious identification, all of the surveys in the custom analysis include the following baseline demographic information for respondents: gender, race, educational attainment, age, and ZIP Code.

## Modeling

The full model includes seven categories of age (18-24; 25-34; 35-44; 45-54; 55-64; 65-74, 75+), three categories of race and ethnicity (Non-Hispanic White; Hispanic; Non-Hispanic Other), two

Assessing the Validity of Data Synthesis Methods to Estimate Religious Populations. *Journal for the Scientific Study of Religion*, 57(2), 206-220.

<sup>8</sup> Series identification is included in the dataset to be able to examine differences across surveys that can be accounted for by survey series.

<sup>9</sup> Currently there are too few surveys of representative samples of all U.S. adults that include alternative methods of Jewish identification. Thus, the present analyses focus on the JBR population only.

categories of sex (Male/Female), and two categories of educational attainment (Non-College / College).

The lowest level of geography available for analysis was the ZIP Code of the respondent. The area included in the analysis is comprised of 309 zip codes in 11 counties in the Chicago metropolitan area. There are too few observations per ZIP Code, so ZIP Codes were clustered into groups based on regions defined at the sampling stage for the Metropolitan Chicago Jewish Population Study. The model includes 10 ZIP Code clusters (see description of these areas below).

The model is displayed below, where the outcome variable  $y_i$  represents the Jewish identification of the respondent  $i$ .

$$\Pr(y_i = 1) = \text{logit}(\beta_0 + \alpha_{j[i]}^{female} + \alpha_{k[i]}^{age} + \alpha_{l[i]}^{edu} + \alpha_{m[i]}^{race-ethn} + \alpha_{k,l[i]}^{age.edu} + \alpha_{o[i]}^{geo} + \alpha_{p[i]}^{survey})$$

$$\alpha_j^{female} \sim N(0, \sigma_{female}^2) \text{ for } j = 1, 2 \text{ categories of sex}$$

$$\alpha_k^{age} \sim N(0, \sigma_{age}^2) \text{ for } k = 1, \dots, 7 \text{ categories of age}$$

$$\alpha_l^{edu} \sim N(0, \sigma_{edu}^2) \text{ for } l = 1, 2 \text{ categories of educational attainment}$$

$$\alpha_m^{race-ethn} \sim N(0, \sigma_{race-ethn}^2) \text{ for } m = 1, 2, 3 \text{ categories of race – ethn}$$

$$\alpha_{k,l}^{age.edu} \sim N(0, \sigma_{age.edu}^2) \text{ for } k, l = 1, \dots, 14 \text{ categories of age.edu}$$

$$\alpha_o^{geo} \sim N(0, \sigma_{zclust}^2) \text{ for } o = 1, \dots, 10 \text{ of ZIP Code clusters geographical areas}$$

$$\alpha_p^{survey} \sim N(0, \sigma_{survey}^2) \text{ for } p = 1, \dots, \# \text{ of surveys}$$

The model was fit using the Bayesian software Stan<sup>10</sup> in R using the *rstan* package<sup>11</sup>. Preliminary multilevel logistic regressions were run using the *lme4* package for R<sup>12</sup>. Table A5 shows the assignment of zip codes to the 10 zip code clusters used in modeling.

## Jewish Population Estimates

Results from the model provide overall population estimates as well as estimates of the distribution of Jews by demographic characteristics for the 10 ZIP Code areas in the Chicago metro area.

The overall estimate of the adult population who identify as Jewish by religion in the Chicago metro area is 184,900 corresponding to 2.86% of the adult population in the same area. The distributions within the adult Jewish population varied by age, education, gender and race as well as by geography. Table A6 presents this information.

Table A6. 2020 Chicago Metropolitan Area Population Estimates for JBR Adults

	All Adults <sup>a</sup>	JBR Adults <sup>b</sup>				
	Pop.	Percentage of all Adults (CI)		Pop.	CI: Low	CI: Hi
<b>Greater Chicago Metropolitan Area</b>	6,475,600	2.9	(2.7, 3.1)	184,900	172,200	198,100
<b>Age</b>						
18-24 years	753,800	2.1	(1.6, 2.7)	16,000	12,200	20,100
25-34 years	1,172,000	2.5	(2.1, 2.9)	29,100	24,300	34,300
35-44 years	1,127,500	2.1	(1.7, 2.5)	23,800	19,300	28,400
45-54 years	1,096,500	2.4	(2.1, 2.8)	26,400	22,600	30,800
55-64 years	1,065,200	3.1	(2.7, 3.5)	32,900	28,900	37,300
65-74 years	748,000	3.9	(3.4, 4.4)	28,800	25,400	32,700
75+ years	512,700	5.4	(4.7, 6.3)	27,800	24,000	32,100
<b>Education</b>						
Non-College	4,179,000	1.7	(1.4, 1.9)	69,000	60,100	78,900
College Grad	2,296,600	5.1	(4.7, 5.4)	115,900	107,100	123,900
<b>Gender</b>						
Male	3,132,200	2.8	(2.6, 3.1)	88,900	81,500	96,100
Female	3,343,400	2.9	(2.6, 3.1)	96,000	88,400	104,000
<b>Race</b>						
White, non-Hispanic	3,572,800	4.7	(4.4, 5.0)	167,000	155,300	178,500
Hispanic	1,280,100	0.9	(0.6, 1.2)	11,400	7,800	15,600
Other non-Hispanic	1,622,700	0.4	(0.3, 0.6)	6,500	4,100	9,500
<b>Geography</b>						
City Far North	241,600	6.1	(4.9, 7.3)	14,600	11,800	17,600
City North	383,900	8.2	(7.0, 9.4)	31,500	26,900	35,900
Near North Suburbs (East)	93,700	13.0	(10.8, 15.3)	12,200	10,200	14,300
Near North Suburbs (West)	228,100	6.0	(4.8, 7.3)	13,600	10,900	16,600

## Bias and Limitations

The study team made every effort to field a representative sample of the Metropolitan Chicago area Jewish population to assure the quality of estimates, including developing a comprehensive sampling frame, collecting survey data by web and telephone, and conducting extensive nonresponse follow-up. Nonetheless, there are limitations. Certain subgroups of the area Jewish population may be less likely to respond to the survey than others. Statistical adjustments used in the survey weighting process commonly assume that after adjusting for certain variables, the characteristics of responding and nonresponding households similar. However, this assumption may not always hold, which may lead to bias for estimates. In addition, changes in the population occurring between sample frame development and the data collection period may not be fully reflected in estimates. Because of this, newcomers to the community may be underestimated.

# SECTION B. ANALYSIS

All analyses were completed using statistical software Stata, version 17. Unless otherwise noted, all analyses were restricted to Jewish households (in which at least one adult was Jewish) as well as individual Jewish adults and Jewish children who were specifically identified by respondents as being Jewish. Analyses of characteristics of the entire population were based only on the primary sample with appropriate weights applied. All analyses of subgroups or subsets of the population were conducted using the full sample with appropriate weights applied.

## Qualitative Coding

The survey included a set of open-ended questions that supported write-in responses rather than multiple choice. Responses were coded by CMJS/SSRI staff and student research assistants, with at least two researchers coding each question.

Coders were trained to ensure intercoder reliability, stability, and accuracy. Their work was reviewed on an ongoing basis for quality control. Difficult cases were marked for review by supervisors.

Coding was conducted both deductively and inductively. For each question, coders were given a set of categories to look for in the responses; these categories were based on those used for similar questions from previous studies. However, coders were also instructed to watch for emerging patterns. When a coder believed that a new pattern of responses existed within the data, they reviewed their findings with a supervisor who decided whether the new pattern warranted a new code. When a new code was created, the coders reviewed previously coded entries to check whether the new code would apply to them.

## Index of Jewish Engagement

Latent Class Analysis (LCA) is a method<sup>14</sup> for uncovering the latent dimensions that explain the associations between categorical variables. It is a statistical method that is designed to identify latent variables. Latent variables are hypothesized variables of interest that cannot be measured directly in a dataset but are measured indirectly through variables that can be included (observed or manifest variables). As an illustration, “Jewish engagement” cannot be measured directly on a survey, but it is the latent variable of interest for the present study<sup>15</sup>.

Unlike factor analysis, a more frequently utilized method of cluster analysis, the goal of LCA is to identify classifications of people rather than groups of variables or characteristics. The latent variable for LCA is a categorical variable representing multiple classes or types of people. Each individual is assumed to be a member of only one class. The LCA method assigns, for each case in the dataset, a probability that the case is a member of each class. This assignment is based on the pattern of

---

<sup>14</sup> Henry, N.W., & Lazarsfeld, P. F. (1968). *Latent structure analysis*. Boston: Houghton Mifflin.

<sup>15</sup> Aronson, J.K., L. Saxe, C. Kadushin, M. Boxer, & M.A. Brookner. (2018). A new approach to understanding contemporary Jewish engagement. *Contemporary Jewry*. <https://doi.org/10.1007/s12397-018-9271-8>

responses to the observed variables used in the analysis. An excellent explanation of these techniques can be found at <http://nap.edu/18623>.<sup>16</sup>

Latent class analysis works with the patterns and attempts to group them in such a way that within each group, called a class, there is no association between the items. The latent class is called latent because, although it is actually not in the variable set, it accounts for the associations between the manifest variables in the same way that a third variable can account for the observed association between two variables. In the classic example of a nonsensical statement, “The more firemen at a fire, the greater the damage,” the association is accounted for by a third variable—the size of the fire. The greater the fire, the more firemen; the greater the fire, the more damage. In technical terms, this is called “local independence,” which is also an assumption of factor analysis. The goal of completely accounting for the associations is rarely met, in part because there are so many empty cells, as well as the messiness of real data. Rather, the method tries to find through iterative fitting the right number of classes and relationship between them that minimizes the discrepancy between a perfect fit and the actual data.

To develop an index of Jewish engagement for the present report, 19 items were used to represent the range of Jewish behaviors (Table C.1.) These items were selected to include ritual, communal, and cultural behaviors, as well as public and private behaviors. In all cases when items had more than two possible response levels, responses were dichotomized with the cutoff based on the distribution of responses in the original variable. After conducting the latent class analysis, a five-class solution was identified.

Latent Class Analysis was conducted in Stata version 16 using a user-developed LCA Stata Plugin<sup>17</sup> developed by the Methodology Center at Penn State<sup>18</sup>.

Solutions were examined for up to nine classes, as shown in Figure B1. The five class solution was selected as the point where the goodness-of-fit measures “level off,” that is, improvement by adding more classes begin to decline. In addition, the five-class solution made intuitive sense. As in factor analysis, the number of classes, like the number of factors, is partly a matter of theory and intuition and the labels for the classes and factors are given by the analyst and are not in the data themselves. In addition to various indexes of fit, the output of the Stata program among other matters shows the size of the classes, the probability that a particular indicator would be endorsed by a member of a particular class, and the limits of confidence for the various parameters. The output is voluminous and not presented in this report. As is the case with factor analysis, the names of the classes were developed by researchers to characterize the distinguishing behaviors of each class.

Figure B1. Goodness-of-Fit measures for 3 through 9 LCA classes

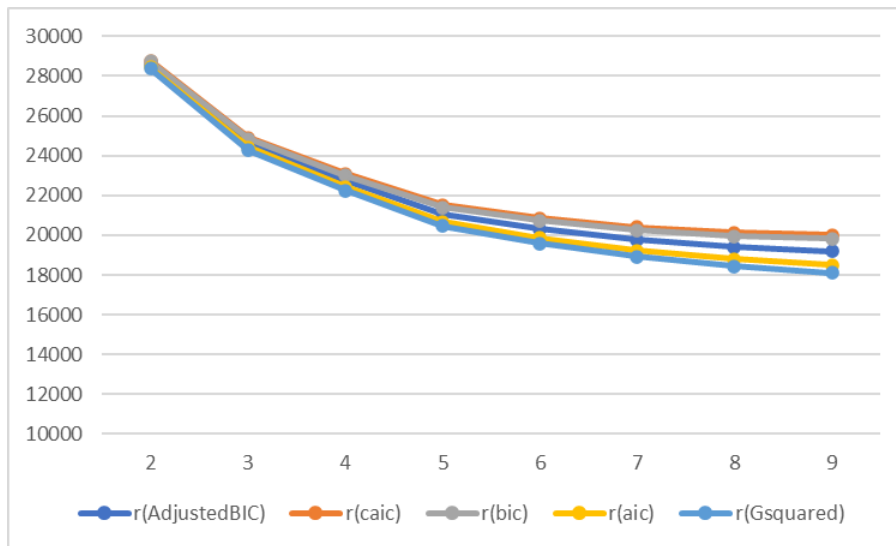

Table B1 shows the conditional response probabilities for each behavior in the LCA analysis with the five-class solution. The first row of the table shows the probability of a random respondent being categorized in each of the five classes. The remaining rows show the conditional response probability of each behavior: the probability that a randomly selected member of a class will exhibit the given behavior. For example, for those in the class we called “Occasional,” the estimated probability of attending a seder was 41% as compared with 99% for those labelled “Immersed.”

Table B1. Conditional probability predicted by latent class model

	<b>Personal (%)</b>	<b>Participant (%)</b>	<b>Holiday (%)</b>	<b>Communal (%)</b>	<b>Immersed (%)</b>
% of Jewish adults	27	13	19	21	19
Home holidays					
Attended seder, 2020	20	42	69	84	92
Lights Hanukkah candles, typical year	46	80	89	97	99
Ritual behaviors					
Shabbat candles/dinner, ever	10	28	55	72	94
Almost always or always	0	1	10	15	53
Services in past half year	9	37	79	100	94
High Holiday services 2020 (any setting)	0	3	59	93	80
Keeps kosher at any level	9	10	30	36	74
Organization behaviors (past year)					
Congregation member	0	5	24	64	77
Organization member	2	15	6	32	47
Informal group member	1	13	5	19	29
Attend Jewish-sponsored program, ever	1	90	0	92	88
10 or more times	0	3	0	10	26
Volunteer for Jewish organization	0	7	2	25	45
Donated to Jewish organization	19	43	58	79	95
Individual behaviors, frequently (past year)					
Talk about Jewish topic	4	19	27	31	88
Seek out news about Israel	4	14	21	11	73
Read Jewish publications	2	7	11	6	81
Engage with Jewish-focused culture	3	8	15	8	69
Eat Jewish foods	6	14	21	20	70

NOTE: This table should not be confused with Table 3.1 in the main report, which shows weighted proportions of class membership and of each behavior within the dataset, rather than conditional probabilities as estimated by the LCA algorithm.

## Exclusion of outliers

When presenting data based on small cell sizes, outlier cases can have an outsized effect that distort the interpretation of findings. We suppressed outliers in a number of cases under the following conditions:

Outlier cases are suppressed from analysis when excluding a single response changed the point estimate by 15% of the original estimate and a minimum of a five percentage point change.

For example, if excluding a case changes an estimate from 20% to 15%, the case is suppressed (five is 25% of 20 and a five-point change). If excluding the case changes the estimate from 50% to 45%, it is not suppressed (a five-point change, but only 10% of 50).

Table B2 displays the tables in the report in which outliers were suppressed, the rows and columns (if applicable), and the tokens of the outliers.

**Table B2. Outlier cases**

<b>Table</b>	<b>Row</b>	<b>Column (if applicable)</b>	<b>Token</b>
3.2	Orthodox	Personal	10035971
3.10	Orthodox	Personal	10035971
5.2	North Suburbs Lake	Outside Metro Chicago	10131669
5.2	Parent Pre-K	Outside Metro Chicago	10049352
11.1	Parent Pre-K	Fair or poor	10313880
11.15	Parent Pre-K	No one	10313880

# Metropolitan Chicago Jewish Population Study

✧ NORC at the  
University of  
Chicago

Brandeis  
UNIVERSITY

Can you take some time to share your experiences to inform the work of local Jewish organizations? With the many challenges facing communities today, including the COVID-19 pandemic, sharing your experiences is more important than ever!

1. Visit <https://mcjps.norc.org> or call (877) 832-0398
2. Find your **Access Code** (on our prior letter/email)
3. Complete the survey

Your answers will be kept confidential. There are no right or wrong answers, and your personal information will not be shared with anyone else.

If you have already completed the survey, thank you!

55 E. Monroe St., 19th Floor, Chicago, IL 60603

HH Address 2  
City, ST zip

October 2020

Dear {NAME} Household,

**Your voice matters.** Make sure you are represented by taking part in the Metropolitan Chicago Jewish Population Study (MCJPS)! This survey will study the diverse needs and interests of the Jewish community in the Chicagoland area to inform the work of local Jewish organizations. You may have heard about this survey, and perhaps received an invitation to participate, last spring before it was postponed due to the COVID-19 pandemic.

NORC at the University of Chicago is partnering with Brandeis University to conduct this study, which is sponsored by the Jewish United Fund. Any information you provide is completely confidential. Your individual responses will not be shared with the Jewish United Fund, and you will not be asked to donate money. Any adult living at your address can complete the survey.

It's easy to complete the survey!

1. Visit **MCJPS.norc.org** or call (877) 832-0398
2. Enter your survey access code: #####
3. Complete the 20-30 minute survey – if you need to step away, you can exit and re-enter the survey where you left off

**Your experiences and perspective matter to us.** Our goal is to have a large, diverse cross section of Jewish households in the Chicagoland area take part in this study. If we don't hear from you, we may call you in the next few weeks to complete the survey. The call will come from NORC at the University of Chicago, (312) 578-0398.

If you have questions, please email [MCJPS@norc.org](mailto:MCJPS@norc.org) or call (877) 832-0398. See the enclosed card for more information.

Please complete the survey soon. Thank you for taking part in this important research.

Sincerely,

Don Jang, PhD  
Vice President, Statistics and Data Science  
NORC at the University of Chicago

The {NAME} household  
HH Address 1  
HH Address2  
City, ST zip

October 2020

Dear {NAME} household,

**You're invited! We know you are busy, and your time is valuable** - especially now as so many are dealing with concerns around the COVID-19 pandemic and other major challenges. When you complete the Metropolitan Chicago Jewish Population Study survey, you make sure that that your voice is heard and will shape community decisions for years to come.

The survey is closing soon, so please get started!

1. Visit **MCJPS.norc.org** or call (877) 832-0398
2. Enter your survey access code: #####
3. Complete the 20-30 minute survey – if you need to step away, you can stop and start the survey again where you left off

Your survey answers will be combined with responses from other Jewish residents living in the Chicagoland area. Local Jewish organizations will use the survey responses to help plan how to best serve the needs of the metropolitan Chicago Jewish community—needs that may be significantly changed in light of recent crises, including the COVID-19 pandemic. Any adult living at your address can complete the survey.

If you have questions, please email [MCJPS@norc.org](mailto:MCJPS@norc.org) or call (877) 832-0398. See the enclosed pamphlet for more information.

Thank you for taking time to consider taking part in this important research.

Sincerely,

Don Jang, PhD  
Vice President, Statistics and Data Science  
NORC at the University of Chicago

Для информации на русском языке звоните (781) 736-4488

## **Metropolitan Chicago Jewish Population Study**

- The survey is completely voluntary
- It will take about 20-30 minutes to complete
- You can complete it in more than one sitting
- Any adult age 18 or older from each household can take part

### **Why should I complete the survey?**

Your participation in this community study will help local Jewish organizations to estimate of the size of the Jewish community, evaluate programming, assess needs, and inform planning and resource allocation for the coming decade.

### **Who is conducting the study?**

NORC at the University of Chicago is partnering with the Maurice and Marilyn Cohen Center for Modern Jewish Studies (CMJS) at Brandeis University to conduct this survey. NORC is an objective, non-partisan research institution that delivers reliable data and rigorous science to guide critical, business, program, and policy decisions. NORC has been conducting impactful, unbiased research for over 75 years. CMJS is a multi-disciplinary research institute studying American Jewry and religious and cultural identity.

### **Who is sponsoring the study?**

The Jewish United Fund is sponsoring this study. Learn more when you visit [www.juf.org](http://www.juf.org).

### **How will you protect my confidentiality?**

All information is kept in password-protected files that are available only to the team of researchers at NORC and CMJS. It will not be released to any agency in your local Jewish community, including JUF, or any other outside organization. At the end of the project, identifying data will be destroyed.

# Metropolitan Chicago Jewish Population Study

## How do I participate?

- Follow the instructions on the letter.
- Look for an email invitation from [MCJPS@norc.org](mailto:MCJPS@norc.org).

## Why did I receive a survey invitation? How did you get my contact information?

Your household was randomly selected from a list developed by NORC and CMJS of households in your area. CMJS obtained your information from a local Jewish organization, publicly available data, or a list purchased from a commercial data broker.

## I'm not Jewish. Should I still complete the survey?

Absolutely. If anyone in your household is currently Jewish or was raised Jewish we would like to learn more about you. If not, answering a few brief questions will help us to estimate the number of Jewish and non-Jewish households that appear on our lists.

## I'm not involved with the Jewish community at all. Should I still complete the survey?

Absolutely. The Jewish community would like to understand all Jewish people in the community, no matter their level of involvement. Your feedback will help the community to develop programs that better meet your needs.

## What if I don't want to participate?

- If you receive an email invitation, you can opt out of future reminders.
- If an interviewer calls you, tell the caller you would like to be removed from the study.
- Email [MCJPS@norc.org](mailto:MCJPS@norc.org) or call (###) ###-#### and include your access code from your letter or email.

October 2020

Dear [City] Community Member,

Share your opinion and represent your community by taking part in the *Chicagoland Speaks!* community survey. We are surveying adults in the metropolitan Chicago area about a number of issues facing them.

It's easy to get started!

1. Visit **speaks.norc.org** or call (877) 832-0398
2. Enter your survey access code: #####
3. If you are eligible, complete the 20-30 minute survey
4. **We will send you \$10 as a thank you!**

NORC at the University of Chicago is partnering with Brandeis University to conduct this survey. Your household has been selected to represent other households like yours in the Chicagoland area. Your participation is important to us. If we don't hear from you, we may call you in the next few weeks to complete the survey. The call will come from NORC at the University of Chicago, (312) 578-0398.

If you have questions, please email [Speaks@norc.org](mailto:Speaks@norc.org) or call (877) 832-0398 or see the enclosed card for more information about the survey.

The \$2 bill is a thank you. Please get started as soon as you can – answer a few questions to see if you or someone in your household is eligible to complete the survey and get an additional \$10. Your participation is more important now than ever, as we seek to better understand the unique needs of those in the Chicagoland area in light of recent events including the COVID-19 pandemic. Thank you in advance for your participation!

Sincerely,

Don Jang, PhD  
Vice President, Statistics and Data Science

**Complete a 20-30 minute  
survey, get \$10!**

Dear [City] Community Member,

You're invited! You may be very busy and we know your time is valuable especially now with so many dealing with concerns around the COVID-19 pandemic and other major challenges. When you take part in the *Chicagoland Speaks!* survey, you can make sure that you have a voice in your community.

Get started now. The survey is closing soon!

1. Visit **speaks.norc.org** or call (877) 832-0398
2. Enter your survey access code: #####
3. If you are eligible, complete the 20-30 minute survey
4. **We will send you \$10 as a thank you!**

We are surveying adults in the metropolitan Chicago area about a number of issues facing them. Your household was among a small number carefully selected from among all households in the Chicagoland area, and the survey is open only to those who receive this invitation. Those that were selected to participate, like yourself, will help to represent all of Chicagoland.

We encourage you to participate and help make sure the experiences of your community are counted. If you have questions, please email [Speaks@norc.org](mailto:Speaks@norc.org) or call (877) 832-0398, or see the enclosed card for more information about the survey.

Thank you!

Sincerely,

Don Jang, PhD  
Vice President, Statistics and Data Science

## **A Community Survey**

### **Complete a survey and get \$10!**

#### **What is the survey about?**

The survey will ask you about different issues facing Chicagoland area residents today. The information collected will be used to evaluate services and programs, assess needs, and inform decision-makers about how to best plan and support the Chicagoland community.

The survey is completely voluntary. It will take about 20-30 minutes to complete. You must be at least 18 years old to participate. Only one person from each household can complete the survey, but it can be any adult in the household.

#### **Who is conducting the study?**

NORC at the University of Chicago and Brandeis University are partnering to conduct this survey. NORC is an objective non-partisan research institution that delivers reliable data and rigorous science to guide critical, business, program, and policy decisions. NORC has been conducting impactful, unbiased research for over 75 years.

#### **Why should I complete the survey?**

This survey is by invitation only. We will ask you a few questions to see if you are eligible to complete the full survey and get \$10. This is a chance for you to be part of an important research study and for your voice to be heard.

## How do I take part?

Participation is easy. You can take the survey from a desktop or laptop computer, tablet, or smartphone with internet access. Just visit [Speaks.norc.org](https://Speaks.norc.org), and enter the Access Code printed on the postcard or invitation letter to complete the survey. You may also complete the survey by phone—call (###) ###-####, provide the access code from your postcard or letter, and an interviewer will ask you the questions over the telephone.

## How was I selected?

We randomly selected your address from all home addresses in the Chicagoland area. This means that when you respond, you represent hundreds of other Chicagoland residents like you. When all completed surveys are combined, they represent a snapshot of all Chicagoland households.

## How will you send me \$10?

We will give you \$10. You can choose among different eGift cards sent to your email address.

## How will you protect my privacy?

All information is kept in password-protected files that are available only to the team of researchers at NORC and Brandeis University. It will not be released to any agency or other party except to send you your \$10 gift. At the end of the project, all identifying data will be destroyed.

## 2020 Metropolitan Chicago Jewish Population Study

---

### WELCOME

[SHOW IF P\_SAMPLE=1,4]

Welcome! Thank you for taking part in the Metropolitan Chicago Jewish Population Study (MCJPS)! This survey will study the diverse needs and interests of the Jewish community in the Chicagoland area in order to inform the work of local Jewish organizations. This survey is being conducted by NORC at the University of Chicago, in partnership with Brandeis University, and sponsored by the Jewish United Fund.

[SHOW IF P\_SAMPLE=2,3]

Welcome to the Chicagoland Speaks! community survey. This survey is being conducted by NORC at the University of Chicago in partnership with Brandeis University.

[CAWI] [SHOW IF P\_SAMPLE=1,4] The survey will take 20-30 minutes to complete. Completion of this survey is voluntary and you may skip questions by clicking next to move on to the next question.

[CATI] [SHOW IF P\_SAMPLE=1,4] The survey will take 20-30 minutes to complete. Completion of this survey is voluntary and you may skip questions.

[SPACE]

[CAWI] [SHOW IF P\_SAMPLE=2,3] We want to make sure we are hearing from the voices that represent adults across the Chicagoland area. Please answer a few questions to see if you or someone in your household is eligible to complete the full survey and receive a \$10 thank you, sent to your email as an e-gift card. If you're eligible, and you complete the survey, it will take approximately 20-30 minutes to complete. You will be able to leave and start again, picking up where you left off, if you cannot complete it all at one time. Completion of this survey is voluntary and you may skip questions you'd prefer not to answer by clicking continue to move on to the next question.

This research is conducted under the regulations of the NORC Institutional Review Board (IRB), which protects the rights of people who participate in research. We respect your confidentiality and the privacy of your opinions. No one except NORC researchers who are conducting the survey will have access to your personal contact information. We protect your privacy by grouping your opinions with those of many other people who respond to the survey.

[SHOW IF P\_SAMPLE=2,3]. Your contact information is only used to send you your \$10 thank you e-gift card. Any personal information about you is stored separately from your survey answers on our secure servers, so nobody knows either how you responded or would be able to identify you as a participant. Other than the \$10 thank you e-gift card, there are no risks or benefits to participating in this study. [SHOW IF P\_SAMPLE=1,4] Your contact information is only used for this study. Any personal information about you is stored separately from your survey answers on our secure servers, so nobody knows either how you responded or would be able to identify you as a participant. No one from the Jewish United Fund will see your individual answers, and you will NOT be asked to donate money.

There are no risks or benefits for participating in this study.
